

## New Web Cameras in Time for the Ospreys!

Join Dunrovin Tech Wrangler James Wasem for a Monday morning tour of Dunrovin's latest technology upgrade that was made possible through generous donations from members of the DaysAtDunrovin (D@D) Virtual Village. James loves solving technical problems and learning about the latest innovations in web cameras and broadcast equipment. He's a master at finding cost-effective ways to expand Dunrovin's webcam portal to enhance our members' cyber front porch experiences. James clearly had fun with every aspect of the project: researching equipment features, scouring the internet for good deals, talking with tech and sales reps, and modifying the physical infrastructures.

Installing, testing, and troubleshooting shooting new high-tech electronic equipment with specialized software can be a frustrating endeavor. Patience must be James's middle name as he is unfailingly calm and inclusive while doing his work. He invites people of all ages and skills (or lack there of) to participate, learn, and enjoy the thrill of creating something new.

# A Complicated Installation Process!

James first lined up all the new equipment and hooked it up to the Dunrovin broadcasting network so he could easily trouble shoot before installing the cameras on their respective poles round the ranch.

With the web cameras hooked up on the bench of the ranch office, James worked inside the office to ensure that all the software in the broadcast system's many computers, modems' and routers was seamlessly working with that of the new equipment.

The process also included putting Mrs. Goose Decoy on the nest to ward off any nesting geese that might want to try to lay eggs, and adding a brace to the vertical bar that will now hold a heavier webcam over the nest.

Thanks you and congratulations, James on a job well done!
